

Generate Code for Content Widget

With the content widget you may customize the appearance of the widget and generate the code that allows you to embed it on your website to automatically display specific content from your mobile app.

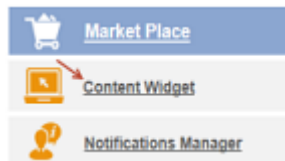

Note: As you make changes on this page, you will see the changes reflected in the preview on the right.

From the Dashboard:

1. Select 'Options' in the header.

2. Choose 'Resources'.

3. Click 'Content Widget'.
4. Select the item for which you would like to generate code from the 'Widget

Type' drop down menu.

5. Enter the desired width and height of the widget in the corresponding fields.

Width px Height px
Min: 100px & Max: 900px

*Note: There is a minimum of 100px and

maximum of 900px.

6. Choose the radio button by 'New Window' if you would prefer that items selected from the widget open in a new browser window or select 'Same

Open links in

☒ New Window 

☐ Same Window 

Window' to open content in the same window of the browser.

7. You have the option to choose a square corner for the content widget or a rounded one.

Corner ☒ Square ☐ Rounded

8. Choose your preferred font from the drop down; then enter the desired font

Feed Font

Font Size px

size.

9. You now have the opportunity to choose a background color for the title bar.

Feed Title

Background Color#

Font Color#

Click on the colored box and move your cursor to the desired color or you may cover the existing color code and enter a new color code.

Feed Content

Font Color Title#

10. Do the same for font color.

11. Follow the same steps for the feed content title, content and background

Feed Content

Font Color Title#

Content#

Background Color#

color.

12. If you would like a separator line to appear between each published item in the content widget, select the radio button by 'On'.

Separator Line ☒ On ☐ Off

13. When you are satisfied, click 'Generate Code'.
